

Since 2004, **Destrudata** has been a specialist in the secure destruction of confidential documents. All documents are destroyed on site using a shredding lorry. All of our **Scania** vehicles are powered by **Xbee**-treated fuel.

Xbee fuels contribute actively to the reduction of the CO<sub>2</sub> emissions, the main greenhouse gas. This **Destrudata's** fleet is reducing its CO<sub>2</sub> emissions by almost

**20**  
**tons per**  
**year**

*Ascal results, based on the Veolia Transport urban fleet of Saumur. Stopping service. Based on 1,500 operating hours per year.*

**Destrudata** is equipped with a fleet of high-specification shredding lorries, and this means that we can offer our clients a destruction service for their confidential documents that is as secure and as ecological as possible.

The fundamental principles of our environmental protection policy are the use of low-polluting shredding lorries, combined with the effects of the **Xbee** enzyme, and the fact that we recycle all of the paper that we shred.

The facts are that one tonne of paper requires approximately 15 trees and 5,000 litres of water to produce, and this water must then be treated before it can be discharged.

In France, the total annual consumption of paper and cardboard is just under 11 million tonnes, the equivalent of 183kg per inhabitant.

Even if paper recycling is on the increase, imagine the quantity of wood used each year by a country like France in order to produce paper.

**Destrudata's** service means that you can maintain the confidentiality of your documents by destroying them on your premises, but you can also protect the environment.

Recycling can reduce pollution by 50%, thereby protecting the quality of the air, water and sun.

Engines and fuels guarantees:

▫ **Xbee** is in compliance with the **CEC** tests, recognized by the **ACEA** that represents 13 of the main European vehicles manufacturers.  
<http://www.acea.be>

▫ On the other hand, **Xbee** respects the European regulation EN 590 Diesel norm and CSR 500 IFO 380 norm.

## BIO-ADDITIF CARBURANTS XBEE

🏠 / [Environnement](#) / Bio-additif carburants Xbee

### “ RÉDUCTION DES ÉMISSIONS POLLUANTES ”

**Afin de réduire encore un peu plus son impact sur l'environnement, Destrudata a fait appel à la société Xbee, spécialisée dans la commercialisation d'un bio-additif carburants permettant de réduire les émissions polluantes.**

Xbee, par essence, est vouée à la préservation de l'environnement :

- ▶ Tout d'abord par sa composition totalement organique, la biotechnologie du bio-additif carburants Xbee ne peut nuire à l'environnement.
- ▶ D'autre part, les résultats en terme d'émissions de gaz polluants sont tout à fait remarquables. En effet, selon des mesures effectuées par un laboratoire indépendant, Xbee permet de réduire toutes les émissions de monoxyde et dioxyde de carbone (Co & CO2), d'oxyde et dioxyde d'azote (NO & NOx), soufre (SO2) et poussières de -12,7% en moyenne.
