

The agricultural company **Marchand** – located in Mayenne, France – offers its services in all kind of agricultural and pruning works. The company has two powerful *New Holland* tractors:

- ✕ New Holland T7040
- ✕ New Holland T6050

The company **Marchand** uses **Xbee** diesel oil since April 2009 in both New Holland tractors. The positive results have been observed quickly, in particular regarding the filter cleanliness.

Michel Marchand used to change his fuel filters every 600 running hours. Using **Xbee** fuel the filters are still clean after more than 2,000 hours! Michel Marchand use the same filters with confidence for another thousand running hours.

It is quite obvious that such clean filters after 2,000 hours are the logical consequence of the cleansing effect of **Xbee** additive in the fuel, but also in the whole fuel system: from tank to reservoir to engine.

Xbee fuels contribute actively to the reduction of the CO₂ emissions, the main greenhouse gas. This company is reducing its CO₂ emissions by almost

5
tons per
year

Ascal results, based on the Veolia Transport urban fleet of Saumur. Stopping service. Based on 1,500 operating hours per year.

Sustainable Development

Michel Marchand, just by using **Xbee** fuel in his two tractors, has reduced his CO₂ emissions by about five tons per year.

There are about 2 million agricultural tractors in France. Based on this data, we could save 3 million tons of CO₂ every year!

Engines and fuels guarantees:

✕ **Xbee** is in compliance with the **CEC** tests, recognized by the **ACEA** that represents 13 of the main European vehicles manufacturers.

✕ On the other hand, **Xbee** respects the European regulation EN 590 Diesel norm.
