

Swedish people living largely in rural areas, and have just as much right to the good supply of propellant that urban population. When the big petrol companies lay down their stations in rural areas rapidly, this creates a problem for the population in the Swedish countryside. **Smart Energy** wants to remedy the problem! **Smart Energy** is an energy company in Gothenburg, Sweden, that has the goal of using simple and environmentally friendly gas stations to become a leading supplier of fuels to the Swedish people. The vision is that within a five-year period, the network will expand to 100 **Smart** refueling stations across Sweden.

Smart Töreboda filling stations manufactured by welding and are completely automated. **Smart** run by a small organization with little overhead costs, and as a result of a lean organization, we can therefore keep fuel prices at the stations. All parts of the operation as finance, service and public relations are subcontracted to consulting firms to completely reduce the risk of getting stuck with high costs when filling stations are constructed.

Smart is a completely new and unique concept to provide the Swedish people with fuel!

More than that, **Smart** also offers bulk fuel to industrial and agricultural customers and holds 5% of the Swedish market, which represents about 75,000 cbm of fuels. The objective of **Smart Energy Sweden** is to reach sales of 300,000 cbm of fuels per year!

Since November 1st, 2015, Fredrik Johansson - CEO, decided to add the Xbee Natural Fuel Additive to all the fuels distributed by **Smart Energy** and becomes the first and exclusive distributor of Xbee fuels in Sweden.

Engines and fuels guarantees:

α **Xbee** is in compliance with the **CEC** tests, recognized by the **ACEA** that represents 13 of the main European vehicles manufacturers. 
<http://www.acea.be>

α On the other hand, **Xbee** respects the European regulation EN 590 Diesel norm.
